

FOR IMMEDIATE RELEASE

Solusia Salutes Cell Tower Riggers and Climbers During National Safety Month

ATLANTA – (June 20, 2007) – In recognition of National Safety Month, Solusia, the premiere provider of [professional site services for the wireless industry](#), today acknowledges the excellent work and vital role played by cell tower construction specialists in building towers for the cellular industry.

According to the U.S. Bureau of Labor Statistics, tower erector/climber still ranks as one the most dangerous occupations in terms of percentage of fatalities per 100,000 workers, along side other perilous jobs such as fishermen, loggers, and iron/steel workers. Cell tower riggers and workers are required to climb cell towers and other communication structures high above the ground.

“For our tower construction partners, safety is the foundation of their underlining company culture, almost to the point it becomes a religion,” said Chris Moccia, COO of Solusia. “We are honored to salute those individuals who work everyday in such a dangerous environment.”

Emphasis on safety in the wireless construction industry has actually dropped tower climber from the top of the most dangerous jobs in 2004 to fourth in the latest release of statistics from the Bureau. Persistent focus and refinement on best practices for safety should continue this positive trend.

“Tower and site construction is often an overlooked and risky aspect of the wireless industry,” said Fred Go, VP of Marketing for Solusia. “Fishing gets more notoriety with TV’s ‘Deadliest Catch’, but without the climbers literally the building backbone our industry, where would all of our cell phones and PDA’s connect to if we didn’t have them safely putting up cell sites?”

About Solusia

Solusia has been the premiere provider of full turn-key site services for the mobile industry since 1998. Solusia’s SiteScope product portfolio covers all dimensions of a wireless site’s lifecycle: from RF engineering to site acquisitions, site construction & modifications to site decommissioning. Wireless operators attain end-to-end services that are efficient and cost effective at a national level from a single source. Headquartered in Atlanta with offices in Dallas, Orlando, Boca Raton, and Richmond, Solusia is focused exclusively on wireless and has developed some of the strongest partnerships in the industry.
